

GMCoin

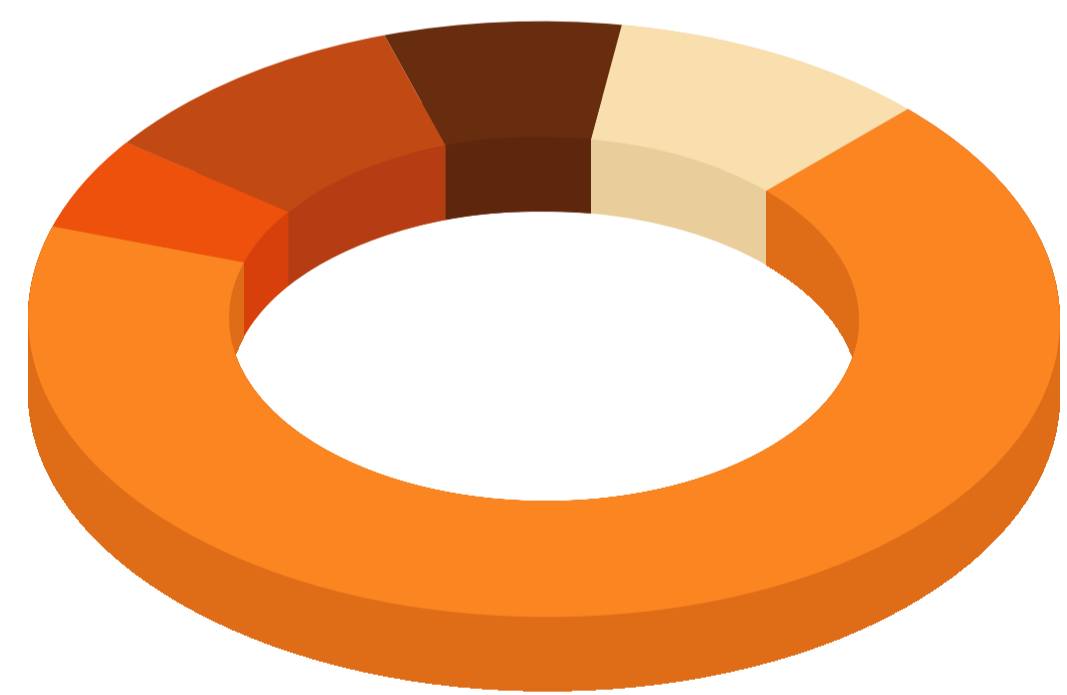

Abstract

There are over 250 Trillions USD of real world assets and most of these are still signified by papers and they are highly liquid. With development of blockchain technologies, ownership will continue to move from analogue to digital.

Blockchains not only digitizing these also helping fintech to be more transparent, decentralized and mobilized. On-chain tokens that demonstrate the real world assets are often labelled as security tokens.

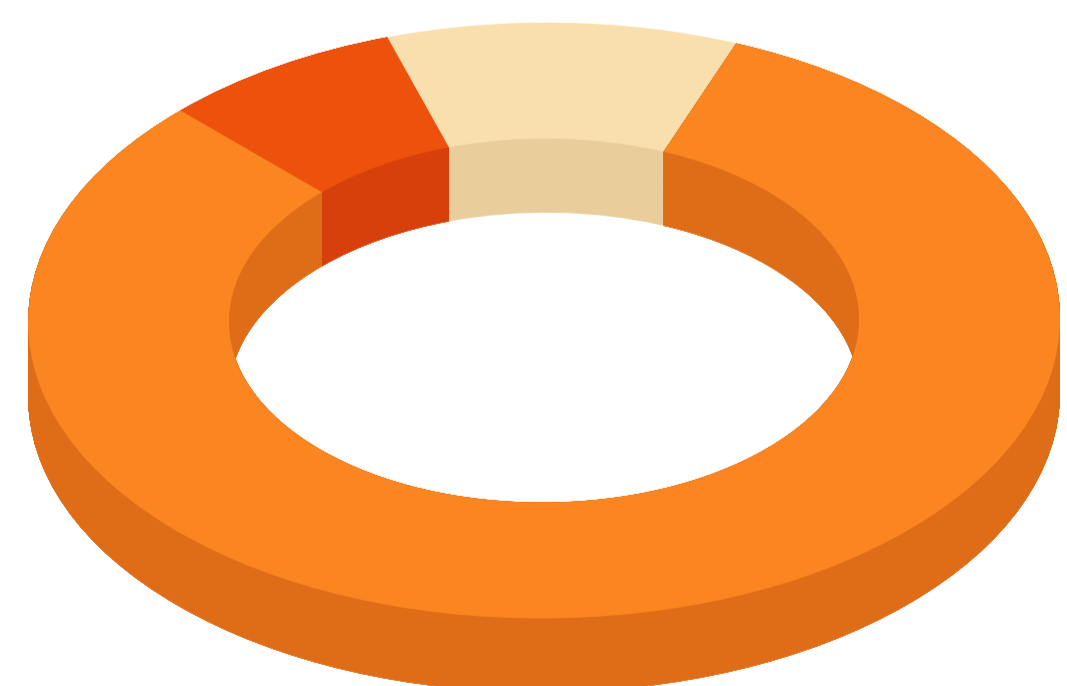

These tokens attached to traditional securities like stocks, shares or commodities that are digitally traded in the markets today. GMC is the path to GMI security tokens that are released in future and awaiting regulations in cryptocurrency world by the governments and the authorities

Fund Distribution

- Token Sale: 54m
- Token Distribution: 4m
- Team Holdings: 8m
- Marketing: 6m
- Retained by GM: 8m

Token Sale

- Distributed during PRE ICO (Initial Coin Offering): 4m
- Distributed during ICO (Initial Coin Offering): 6m
- Distributed thru IEOs (Initial Exchange Offering): 44m

Roadmap

Business Plan

Since in an inflationary economy this issue creates an unsustainable growth, SMBs and SMEs needs a more convenient, fast, sustainable ways for fundraising. Which we believe tokenization model is perfect match for this. So we start the torch as we are transforming ten years old company to a fully tokenized model with highly transparent, yet secure blockchain technologies. We believe this will also creates a reference model for the companies for the future for fundraising with their own tokenized systems.

GMC token is created with 80 millions max cap which can not be added later. It's working on one of the fastest blockchain platforms TRON ecosystem with system level contracting TRC-10. The token natively supports smart-contracts and most part will be circulated in public exchanges. The funds that raised in this model will be used in «GM Informatics JSC» for new projects and new investments. We are doing great for ten years as a company and we believe with tokenization we will boost up in ICT industry. So our investors also will make profits from these in long term.

When Security Tokens fully supported legally in multiple countries we will publish our GMI security token which is capped to 8 millions and attached to real company shares, equities and securities. And GMI will only be purchasable with GMC token which will be used as a gateway token to GMI in the future

Optimistic.be

Decentralise the way you raise fund!!!

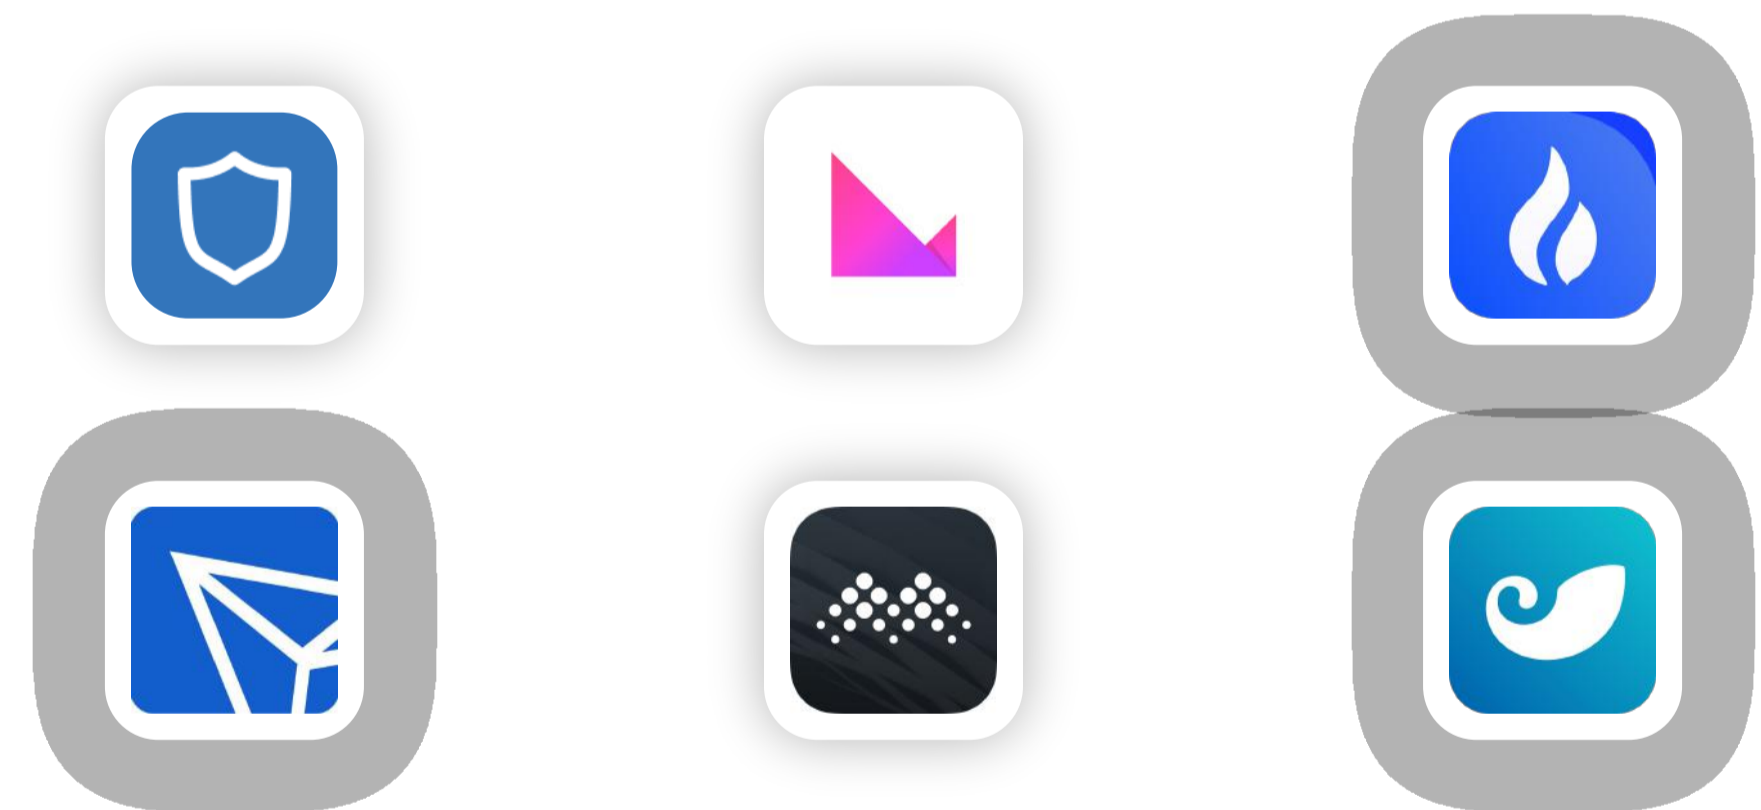

It is a decentralised kickstarter crowdfunding platform developed under the GMC ecosystem. Let us talk about crowdfunding first, what is it? It is nothing but raising money from a large number of people to support a venture or start-up. This helps the start-ups to take the first step towards their goal. Optimistic.be is also a kickstarter is a crowdfunding platform which is decentralized in nature. There are many advantages of a crowdfunding platform.

It can be a quick way to generate funds with no additional fees, preparing a pitch deck of a project or business with the help of the platform. This can result in a significant form of marketing and can grab a lot of attention. Also, you can get feedbacks from mentors, experts of these lines who have practical knowledge and hands on experience of the project that you are going to work on. The expert guidance will help you with better results.
